Augmented reality This experience is seamlessly interwoven with the physical world such that it is perceived as an immersive aspect of the real environment. In this way, augmented reality alters one's ongoing perception of a real-world environment, compared to virtual reality, which aims to completely replace the user's real-world environment with a simulated one. As such, it is one of the key technologies in the

reality-virtuality continuum. Augmented reality is typically visual, but can span multiple sensory modalities, including auditory, haptic, and somatosensory. Augmented reality refers to experiences that are artificial and that Augmented reality (AR), also known as mixed reality (MR), is a technology that overlays real-time 3D-rendered computer graphics onto a portion of the real world through a display, such as a handheld device or head-mounted display 78f13b1681

Time and engineers, in particular, made improvements on the use of water clocks up to the Middle Ages. Time is often referred to as a fourth dimension, along with three spatial dimensions. In the 11th century, Chinese inventors and engineers invented Time is the continuous progression of existence that occurs in an apparently irreversible succession from the past, through the present, and into the future. Time dictates all forms of action, age, and causality, being a component quantity of various measurements used to sequence events, to compare the duration of events (or the intervals between them), and to quantify rates of change of quantities in material reality or in the conscious experience 78f13b1681
