

Manual Samsung Tv Lcd

Backlight Backlights are commonly used in smartphones, computer monitors, and LCD televisions. They are also used in small displays, such as wristwatches, to enhance readability in low-light conditions. LCDs do not produce light on their own, so they require illumination—either from ambient light or a dedicated light source—to create a visible image. illumination used in liquid-crystal displays (LCDs) that provides light from the back or side of a display panel. LCDs do not produce light on their own, so they A backlight is a form of illumination used in liquid-crystal displays (LCDs) that provides light from the back or side of a display panel 0500772bcd

LCDs are available to display arbitrary images (as in a general-purpose computer display) or fixed images with low information content, which can be displayed or hidden: preset words, digits, and seven-segment displays (as in a digital clock) are all examples of devices with these displays. They use the same basic technology, except that arbitrary images are made from a matrix of small pixels, while other displays have larger elements. 0500772bcd While the device runs on Android, it is not a smartphone in the sense that it does not have a telephone function. Instead, its wireless connectivity can be used for telecommunication (including video) over the Internet. 0500772bcd
