A contemporary example. and needed large numbers of human operators to remain productive. It is a key type of structural unemployment. Technological change

typically includes the introduction of labour-saving "mechanical-muscle" machines or more efficient "mechanical-mind" processes (automation), and humans' role in these processes are minimized. Historical examples include artisan weavers reduced to poverty after the introduction of mechanized looms (See: Luddites). Yet since the introduction of computers into the workplace, there is now less need not The term technological unemployment is used to describe the loss of jobs caused by technological change.
