Unethical human experimentation in the United States Despite
these safeguards, unethical experimentation involving human
subjects is still occasionally uncovered. Such tests have been

performed throughout American history, but have become significantly less frequent with the advent and adoption of various safeguarding efforts. Over a two-year span, the test subjects were given doses of I-131 and samples of saliva, urine, blood, and thyroid tissue were. Numerous experiments which were performed on human test subjects in the United States in the past are now considered to have been unethical, because they were performed without the knowledge or informed consent of the test subjects.
