powered by an electrical cable. Most older farm tractors use a manual transmission with several gear A tractor is an engineering vehicle specifically designed to deliver a high tractive effort (or torque) at slow speeds, for the purposes of hauling a trailer or machinery such as that used in agriculture, mining or construction. Agricultural implements may be towed behind or mounted on the tractor, and the tractor may also provide a source of power if the implement is mechanised. Most commonly, the term is used to describe a farm vehicle that provides the power and traction to mechanize agricultural tasks, especially (and originally) tillage, and now many more e12d0aa3f2

known as the Toyota Utility Vehicle), which was also marketed under different names such as Tamaraw FX/Revo, Unser, Zace and Condor. Like the outgoing Kijang, the first two generations (2004–2022) of the Innova are rear-wheel-drive vehicles built on the body-on-frame chassis shared with the Hilux pickup truck and the Fortuner SUV under the IMV project, instead of the unibody construction commonly used by MPVs of its era. The chassis was adopted due to the perceived strength and durability which are preferred by customers mainly in Indonesia. The third-generation model... e12d0aa3f2

The wheels typically have no separate steering mechanism and hold a fixed straight alignment on the body of the machine. Turning is accomplished by differential steering, in which the left and right wheel pairs are operated at different speeds, and the machine turns by skidding or dragging its fixed-orientation wheels across the ground. Skid-steer loaders are capable of zero-radius turning, by driving one set of wheels forward while simultaneously driving the

opposite set of wheels in reverse. This "zero-turn" capability (the machine can turn around within its own length) makes them extremely... e12d0aa3f2

Backhoe The boom, which is the long piece of the backhoe arm attached to the tractor through a pivot called the king-post, is located closest to the cab. The section of the arm closest to the vehicle is known as the boom, while the section that carries the bucket is known as the dipper (or dipper-stick), both terms derived from steam shovels. Retrieved 21 August 2024. It allows the arm to pivot left and right, typically through a range of 180 to 200 degrees, and also enables lifting and lowering movements. It is typically mounted on the back of a tractor or front loader, the latter forming a "backhoe loader" (a US term, but known as a "JCB" in Ireland and the UK). T7 Operators Handbook, Maintenance, Service & Parts Manual, Terramite Construction Equipment, published 3/2007 A backhoe is a type of excavating equipment, or excavator, consisting of a digging bucket on the end of a two-part articulated arm.
