Rev limiter They are intended to protect an engine by restricting its maximum rotational speed, measured in revolutions per minute (RPM). As the RPM of the engine increases, the throttle plate in the A rev limiter is a device fitted in modern vehicles that have internal combustion engines. Most small engines, such as on lawn mowers have a speed governor. may avoid engine damage a809a94adb

Engines of similar design and displacement are also used in smaller vehicles such as motorcycles, motor scooters, all-terrain vehicles, and go-karts. a809a94adb Rev limiters are pre-set by the engine manufacturer. There are also aftermarket units where a separate controller is installed using a custom RPM setting. A limiter prevents a vehicle's engine from being pushed beyond the manufacturer's limit, known as the redline (literally the red line marked on the tachometer). At some point beyond the redline, engine damage may occur. a809a94adb

Small engine These engines often have simple designs, for example an air-cooled single-cylinder petrol engine with a pull-cord starter, capacitor discharge ignition and a gravity-fed carburetor. A small engine is the general term for a wide range of small-displacement, low-powered internal combustion engines used to power lawn mowers, generators A small engine is the general term for a wide range of small-displacement, low-powered internal combustion engines used to power lawn mowers, generators, concrete mixers and many other machines that require independent power sources a809a94adb
