Radio-frequency identification When triggered by an electromagnetic interrogation pulse from a nearby RFID reader device, the tag transmits digital data, usually an identifying inventory number, back to the reader. An RFID system consists of a tiny radio transponder called a tag, a radio receiver, and a transmitter. tag that reports temperature, acceleration and capacitance to commercial Gen2 RFID readers. It is possible that active or battery-assisted passive (BAP) Radio-frequency identification (RFID) uses electromagnetic fields to automatically identify and track tags attached to objects. This number can be used to track inventory goods b5663049a6

Knowledge extraction 06 - Knowledge extraction is the creation of knowledge from structured (relational databases, XML) and unstructured (text, documents, images) sources. The resulting knowledge needs to be in a machine-readable and machine-interpretable format and must represent knowledge in a manner that facilitates inferencing. It requires either the reuse of existing formal knowledge (reusing identifiers or ontologies) or the generation of a schema based on the source data. 309 318, http://analytics. pdf Archived 2013-09-18 at the Wayback Machine (retrieved: 18. interface, Part 2, p. Although it is methodically similar to information extraction (NLP) and ETL (data warehouse), the main criterion is that the extraction result goes beyond the creation of structured information or the transformation into a relational schema. si/~blazf/papers/OntoGen2_HCII2007. ijs b5663049a6
