In the International Classification of Diseases, the latest edition of which is the ICD-11, schizotypal disorder is not classified as a personality disorder, but among psychotic disorders. 21 (3): 115–122. The Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM-5) classifies StPD as a personality disorder belonging to cluster A, which is a grouping of personality disorders exhibiting traits such as odd and eccentric behavior. Non-Euclidean geometry In the former case, one obtains hyperbolic geometry and elliptic geometry, the traditional non-Euclidean geometries. lignes parallèles de Johann Heinrich Lambert, Paris: Librairie Albert Blanchard, ISBN 978-2-85367-266-5 Media related to Non-Euclidean geometry at Wikimedia In mathematics, non-Euclidean geometry consists of two geometries based on axioms closely related to those that specify Euclidean geometry. When the metric requirement is relaxed, then there are affine planes associated with the planar algebras, which give rise to kinematic geometries that have also been called non-Euclidean geometry. As Euclidean geometry lies at the intersection of metric geometry and affine geometry, non-Euclidean geometry arises by either replacing the parallel postulate with an alternative, or relaxing the metric requirement 51b4c101d6

In the 19th century it had become clear that electricity and magnetism were related, and their theories were unified: wherever charges are in motion electric current results, and magnetism is due to electric current. History of electromagnetic theory This work was later published as On Physical The history of electromagnetic theory begins with ancient measures to understand atmospheric electricity, in particular lightning. People then had little understanding of electricity, and were unable to explain the phenomena. Scientific understanding and research into the nature of electricity grew throughout the eighteenth and nineteenth centuries through the work of researchers such as André-Marie Ampère, Charles-Augustin de Coulomb, Michael Faraday, Carl Friedrich Gauss and James Clerk Maxwell. reduced all of the current knowledge into a linked set of differential equations with 20 equations in 20 variables 51b4c101d6
