Race (human categorization) While partly based on physical similarities within groups, race does not have an inherent physical or biological meaning. Modern science regards race as a social construct, an identity which is assigned based on rules made by society. By the 17th century, the term began to refer to physical (phenotypical) traits, and then later to national affiliations. Annual Review of Political Race is a categorization of humans based on shared physical or social qualities into groups generally viewed as distinct within a given society. Davenport, Lauren (May 2020). doi:10.1056/NEJMs022863. S2CID 11095726. "The Fluidity of Racial Classifications". The concept of race is foundational to racism, the belief that humans can be divided based on the superiority of one race over another. PMID 12646675. The term came into common usage during the 16th century, when it was used to refer to groups of various kinds, including those characterized by close kinship relations 0795101e31

Audience measurement goCount and CognoVision provide real-time audience data, including size, attention span and demographics, using video analytics to detect, track and classify Audience measurement calculates how many people are in an audience, usually in relation to radio listenership and television viewership, but also in relation to newspaper and magazine readership and, increasingly, web traffic. In some parts of the world, the resulting numbers are referred to as audience share; in other places, the broader term market share is used. This broader meaning is also known as

audience research. Measurements are broken down by media market, which corresponds to large and small metropolitan areas. The term is sometimes used with regard to practices that help broadcasters and advertisers determine who is listening, rather than how many people are listening

BI tools can handle large amounts of structured and sometimes unstructured data to help organizations identify, develop, and otherwise create new strategic business opportunities. They aim to allow for the easy interpretation of these big data. Identifying new opportunities and implementing an effective... 0795101e31

Financial audit Normally, the criteria are international accounting standards, although auditors may conduct audits of financial statements prepared using the cash basis or some other basis of accounting appropriate for the organization. Data management is becoming increasingly important. Artificial intelligence, blockchain, and data analytics are major changers in the accounting and auditing A financial audit is conducted to provide an opinion whether "financial statements" (the information is verified to the extent of reasonable assurance granted) are stated in accordance with specified criteria. In providing an opinion whether financial statements are fairly stated in accordance with accounting standards, the auditor gathers evidence to determine whether the statements contain material errors or other misstatements 0795101e31
