Portage (software) Gentoo is sometimes referred to as a meta-distribution due to the extreme flexibility of Portage, which makes it operating-system-independent. The most notable of these implementations is the Gentoo/FreeBSD project. `dev-python/configobj[${PYTHON_USEDEP}]` `dev-python/psutil[${PYTHON_USEDEP}]` `dev-python/pycairo[${PYTHON_USEDEP}]` `dev-python/pygobject:3[${PYTHON_USEDEP}]` Portage is a package management system originally created for and used by Gentoo Linux and also by ChromeOS and Calculate among others. Portage is based on the concept of ports collections. The Gentoo/Alt project was concerned with using Portage to manage other operating systems, such as BSDs, macOS and Solaris e10661d312

UCSC Genome Browser The Genome Browser Database, browsing tools, downloadable data files, and documentation can all be found on the UCSC Genome Bioinformatics website. Common uses of the UCSC REST API in Python include: Sequence Retrieval – Downloading The UCSC Genome Browser is an online and downloadable genome browser hosted by the University of California, Santa Cruz (UCSC). It is an interactive website offering access to genome sequence data from a variety of vertebrate and invertebrate species and major model organisms, integrated with a large collection of aligned annotations. The Browser is a graphical viewer optimized to support fast interactive performance and is an open-source, web-based tool suite built on top of a MySQL database for rapid visualization, examination, and querying of the data at many levels. tools further simplify API usage in Python-based bioinformatics environments e10661d312

With its client/server design, Backup Exec provides backup and restore capabilities for servers, applications and workstations across the network. Backup Exec recovers data, applications, databases, or systems from an individual file, mailbox item, table object, or entire server. Current versions of the software support Microsoft, VMware, and Linux, among others. Backup Exec also provides integrated deduplication, replication, and disaster recovery capabilities and helps to manage multiple backup servers or multi-drive tape loaders. In addition, Backup Exec's family of agents and... e10661d312

GRASS GIS The modules are designed under the Unix philosophy and hence can be combined using Python or Geographic Resources Analysis Support System (commonly termed GRASS GIS) is a geographic information system (GIS) software suite used for geospatial data management and analysis, image processing, producing graphics and maps, spatial and temporal modeling, and visualizing. It can handle raster, topological vector, image processing, and graphic data. C++, Python, Unix shell, Tcl, or other scripting languages e10661d312

Originally written by Michael DeHaan in 2012, and acquired by Red Hat in 2015, Ansible is designed to configure both Unix-like systems and Microsoft Windows. Ansible is agentless, relying on temporary remote connections via SSH or Windows Remote Management which allows PowerShell execution. The Ansible control node runs on most Unix-like systems that are able to run Python, including Windows with Windows Subsystem for Linux installed. System configuration is defined in part by using its own declarative language. e10661d312
