Due to its energy consumption, desalinating sea water is generally more costly than fresh water from surface water or groundwater, water recycling and water conservation...

A tunnel may be for foot or vehicular road traffic, for rail traffic, or for a canal. The central portions of a rapid transit network are usually in the tunnel. Some tunnels are used as sewers or aqueducts to supply water for consumption or for hydroelectric stations. Utility tunnels are used for routing steam, chilled water, electrical...

Desalination in the case of reverse osmosis). This is important for agriculture. More generally, desalination is the removal of salts and minerals from a substance. g. An estimate Desalination is a process that removes mineral components from saline water. It is possible to desalinate saltwater, especially sea water, to produce water for human consumption or irrigation, producing brine as a by-product. Along with recycled wastewater, it is one of the few water resources independent of rainfall. Desalination processes are using either thermal methods (in the case of distillation) or membrane-based methods (e. Many seagoing ships and submarines use desalination. One example is soil desalination. Modern interest in desalination mostly focuses on cost-effective provision of fresh water for human use

Tunnel A tunnel is an underground or undersea passageway. A pipeline differs significantly from a tunnel, though some recent tunnels have used immersed tube construction techniques rather than traditional tunnel boring methods. It is dug through surrounding soil, earth or rock, or laid under water, and is usually completely enclosed A tunnel is an underground or undersea passageway. It is dug through surrounding soil, earth or rock, or laid under water, and is usually completely enclosed except for the two portals common at each end, though there may be access and ventilation openings at various points along the length
