The eastern North American monarch population is notable for its annual southward late-summer/autumn instinctive migration from the northern and central United States and

southern Canada to Florida and Mexico. During the fall migration, monarchs cover thousands of miles, with a corresponding multigenerational return north in spring. The western North American population of monarchs west of the Rocky Mountains often migrates to sites in southern California, but have been found in overwintering Mexican sites, as well. Populations are... 4367a372ad
