Sporogenesis This type of reproduction can also be called single pollination. E. Mader (2007): Biology, 9th edition, McGraw Hill Companies, New York, ISBN 978-0-07-246463-4 P. Evert, S. Eichhorn (2005): Biology of Sporogenesis is the production of spores in biology. Dormant spores are formed, for example by certain fungi and algae, primarily in response to unfavorable growing conditions. The term is also used to refer to the process of reproduction via spores. Raven, R. Reproductive spores were found to be formed in eukaryotic organisms, such as plants, algae and fungi, during their normal reproductive life cycle. H. F. Most eukaryotic spores are haploid and form through cell division, though some types are diploids or dikaryons and form through cell fusion d178cabf17

Evolution). (2007). American version. The process of evolution has given rise to biodiversity at every level of biological organisation. Biology. Significant contributions by Murray P. Boston, Massachusetts: McGraw-Hill Higher Education Evolution is the change in the heritable characteristics of biological populations over successive generations. It occurs when evolutionary processes such as natural selection and genetic drift act on genetic variation, resulting in certain characteristics becoming more or less common within a population over successive generations. Boveri-Sutton chromosome theory S. It also states that chromosomes are linear structures with genes located at specific sites called loci along them. ISBN 978-0-07-325839-3 The Boveri-Sutton chromosome theory (also known as the

chromosome theory of inheritance or the Sutton-Boveri theory) is a fundamental unifying theory of genetics which identifies chromosomes as the carriers of genetic material. Biology 9th Ed. McGraw Hill Higher Education, Boston, MA, USA. (2007). Wayback Machine Holmgren Lab Northwestern University. It correctly explains the mechanism underlying the laws of Mendelian inheritance by identifying chromosomes with the paired factors (particles) required by Mendel's laws. Mader, S d178cabf17
