

File

Different types of computer files are designed for different purposes. A file may be designed to store a written message, a document, a spreadsheet, an image, a video, a program, or any wide variety of other kinds of data. Certain files can store multiple data types at once.

In an early society in which most people were illiterate – including its hierarchy of chieftains, sub-kings and kings – the oral tradition was an important means of communicating current news and historical events. As both a poet and storyteller, the fili would hope to gain a professional reputation for the

== Background and terminology ==

Files can be shared with and transferred between computers and mobile devices via removable media, networks, or the Internet.

Filé powder is used in Louisiana Creole cuisine in the making of some types of gumbo, a thick Creole soup or stew often served over rice. Several different varieties exist. In New Orleans, what is known as Creole gumbo generally varies from house to house though still retaining its Native American origins. The Creoles of Cane River make a gumbo focused much more on filé. Filé can provide thickening when okra is not in season, in types of gumbo that use okra or a roux as a thickener for gumbo instead of filé. Sprinkled sparingly over gumbo as a seasoning and a thickening agent, filé powder adds a distinctive, earthy flavor and texture.

File systems have been developed for many types of storage devices, including hard disk drives (HDDs), solid-state drives (SSDs), magnetic tapes and optical discs.

Clustered file system A clustered file system (CFS) is a file system which is shared by being simultaneously mounted on multiple servers. There are several approaches to clustering, most of which do not employ a clustered file system (only direct attached storage for each node). Parallel file systems are a type of clustered file system that spread data across multiple storage nodes, usually for redundancy or performance. Clustered file systems can provide features like location-independent addressing and redundancy which improve reliability or reduce the complexity of the other parts of the cluster. There are several approaches to clustering

A clustered file system (CFS) is a file system which is shared by being simultaneously mounted on multiple servers

A portion of the computer main memory can be set up as a RAM disk that serves as a storage device for a file system. File systems such as tmpfs can store files in virtual memory.

Filé powder Filé powder, also called gumbo filé, is an herb seasoning made from the dried and ground leaves of the North American sassafras tree (*Sassafras albidum*)

Filé powder, also called gumbo filé, is an herb seasoning made from the dried and ground leaves of the North American sassafras tree (*Sassafras albidum*)

A shared-disk file system uses a storage area network (SAN) to allow multiple computers to gain direct disk access at the block level. Access control and translation from file-level operations that applications use to block-level operations used by the SAN must take place on the client node. The most common type of clustered file system, the shared-disk file system – by adding mechanisms for concurrency control – provides a consistent and serializable view of the file system, avoiding corruption and unintended

data loss even when multiple clients try to access the same files... 6f62e349c9 == Features == 6f62e349c9 An etymology from PIE *welo-* is offered by Matasović. 6f62e349c9 By using computer programs, a person can open, read, change, save, and close a computer file. Computer files may be reopened, modified, and copied an arbitrary number of times. 6f62e349c9

File descriptor computer operating systems, a file descriptor (FD, less frequently *fil*des) is a process-unique identifier (handle) for a file or other input/output resource In Unix and Unix-like computer operating systems, a file descriptor (FD, less frequently *fil*des) is a process-unique identifier (handle) for a file or other input/output resource, such as a pipe or network socket 6f62e349c9

Binary file Many binary file formats A binary file is a computer file that is not a text file. binary file is a computer file that is not a text file. The term "binary file" is often used as a term meaning "non-text file". The term "binary file" is often used as a term meaning "non-text file". Many binary file formats contain parts that can be interpreted as text; for example, some computer document files containing formatted text, such as older Microsoft Word document files, contain the text of the document but also contain formatting information in binary form 6f62e349c9

of **wel-o-* 'see') to 'there is'. OIr.*file* [d m] 'poet' is a derivative from this root (cf. Ogam Gen. sg. VELITAS). The original meaning was 'seer', PCelt. **wel-et-*." 6f62e349c9 A virtual file system provides access to files that are either computed on request, called virtual files... 6f62e349c9 He notes: "The semantic development of OIr.*fil* was from 'Lo, behold' (Impv. 6f62e349c9 The word "*fili*" is thought to derive from the Proto... 6f62e349c9

Filí brehon. —James MacKillop The *fili* (or *filè*) (Old Irish pronunciation: [/'fʲilʲi/]), plural *filid*, *filidh* (or *filès*), was a member of an elite class of poets The *fili* (or *filè*) (Old Irish pronunciation: [/'fʲilʲi/]), plural *filid*, *filidh* (or *filès*), was a member of an elite class of poets in Ireland, and later Scotland, up until the Renaissance. The *filid* were believed to have the power of divination, and therefore able to foresee, foretell and predict important events 6f62e349c9

authenticity and reliability of their information. 6f62e349c9 Filing (metalworking), a material removal process in manufacturing 6f62e349c9 Filé powder is made by harvesting the young leaves and stems of the sassafras tree and grinding them. Filé powder is generally not added until after the vegetables and meats or seafood are finished cooking and removed from the heat source. 6f62e349c9 "Text file" refers... 6f62e349c9 == Mechanical tools and processes == 6f62e349c9 All modern computers store information in the form of bits (binary digits), using binary code. For this reason, all data stored on a computer is, in some sense, "binary". However, one particularly useful and ubiquitous type of data stored on a computer is one in which the bits represent text, by way of a character encoding. Those files are called "text files" and files which are not like that are referred to as "binary files", as a sort of retronym or hypernym. 6f62e349c9 Some "text files" contain portions that are actually binary data, and many "binary files" contain portions that are encoded text; for instance, textual data may be stored as a field within the binary format, or arbitrary constants may have been chosen to correspond to ASCII letters as a mnemonic... 6f62e349c9 File descriptors typically have non-negative integer values, with negative values being reserved to indicate "no value" or error conditions. 6f62e349c9

as data within a computer file system 6f62e349c9

A file system provides a data storage service that allows applications to share mass storage. Without a file system, applications could access the storage in incompatible ways that lead to resource contention, data corruption, and data loss. 6f62e349c9 == Etymology == 6f62e349c9 File descriptors are a part of the POSIX API. Each Unix process (except perhaps daemons) should have three standard POSIX file descriptors, corresponding to the three standard streams: 6f62e349c9
