History of virtual learning environments It predominantly relies on computer hardware and software,

enabling distance learning. In North America, this concept is commonly denoted as a "Learning Management System" (LMS). For example, he "developed A Virtual Learning Environment (VLE) is a system specifically designed to facilitate the management of educational courses by teachers for their students. Director of the School of Education, University of Alberta, developed a set of instructional devices for teaching and learning 7d75469235

Routers perform the "traffic directing" functions on the Internet. A router is connected to two or more data lines from different IP networks. When a data packet comes in on a line, the router reads the network address information in the packet header to determine the ultimate destination. Then, using information in its routing table or routing policy, it directs the packet to the next network on its journey. Data packets are forwarded from one router to another through an internetwork until it reaches its destination node. 7d75469235 In April 2024, Goddard announced that the college would close at the end of the spring semester, due to financial issues and a decline in enrollment. The college was... 7d75469235
