Medication costs Prescription costs are the costs to the Medication costs, also known as drug costs are a common health care cost for many people and health care systems. A number of countries including Canada, parts of Europe, and Brazil use external reference pricing as a means to compare drug prices and to determine a base price for a particular medication. Structures. Prescription costs are the costs to the end consumer. Other countries use pharmacoeconomics, which looks at the cost/benefit of a product in terms of quality of life, alternative treatments (drug and non-drug), and cost reduction or avoidance in other parts of the health care system (for example, a drug may reduce the need for a surgical intervention, thereby saving money). Medication costs are influenced by multiple factors such as patents, stakeholder influence, and marketing expenses.
