

Cissp Study Guide By Eric Conrad

Hash collision The hash value in this case is derived from a hash function which takes a data input and returns a fixed length of bits. Conrad, Eric; Misenar, Seth; Feldman, Joshua (2016), "Domain 3: Security Engineering (Engineering and Management of Security)", CISSP Study Guide, Elsevier In computer science, a hash collision or hash clash is when two distinct pieces of data in a hash table share the same hash value b2b10a3208

Encapsulation and deencapsulation allow the design of modular communication protocols so to logically separate the function of each communications layer, and abstract the structure of the communicated information over the other communications layers. These two processes are common features of the computer-networking models and protocol suites, like in... b2b10a3208

Workstation Elsevier. New Straits Times. CISSP Study Guide. The term workstation has been used loosely to refer to everything from a mainframe computer terminal to a PC connected to a network, but the most common form refers to the class of hardware offered by several current and defunct companies such as Sun Microsystems, Silicon Graphics, Apollo Computer, DEC, HP, NeXT, and IBM which powered the 3D computer graphics revolution of the late 1990s. pp. 1016/b978-1-59749-961-3 A workstation is a special computer designed for technical or scientific applications. Conrad, Eric; Misenar, Seth; Feldman, Joshua (2012). doi:10. Intended primarily to be used by a single user, they are commonly connected to a local area network and run multi-user operating systems. 63–141. New Straits Times b2b10a3208

Due to the possible negative applications of hash collisions in data management and computer security (in particular, cryptographic hash functions), collision avoidance has become an important topic in computer security. b2b10a3208 Workstations formerly offered higher performance than mainstream personal computers, especially in CPU, graphics, memory, and multitasking. Workstations are optimized for the visualization... b2b10a3208 Although hash algorithms, especially cryptographic hash algorithms, have been created with the intent of

being collision resistant, they can still sometimes map different data to the same hash (by virtue of the pigeonhole principle). Malicious users can take advantage of this to mimic, access, or alter data. b2b10a3208

Encapsulation (networking) a payload) for transmitting information over computer networks.). Eric Conrad; Seth Misenar; Joshua Feldman (2012). CISSP Study Guide (2nd ed. Elsevier Encapsulation is the computer-networking process of concatenating layer-specific headers or trailers with a service data unit (i. e. "Domain 2:

Telecommunications and Network Security".

ISBN 978-0073376042. Deencapsulation (or de-encapsulation) is the reverse computer-networking process for receiving information; it removes from the protocol data unit (PDU) a previously concatenated header or trailer that an underlying communications layer transmitted b2b10a3208
