Intelligent tutoring system immediate feedback for students when students have trouble answering the questions. There are many examples of ITSs being used in both formal education and professional settings in which they have demonstrated their capabilities and limitations. An ITS typically aims to replicate the demonstrated benefits of one-to-one, personalized tutoring, in contexts. They could guess their answers and have correct answers without deep understanding. An intelligent tutoring system (ITS) is a computer system that imitates human tutors and aims to provide immediate and customized instruction or feedback to learners, usually without requiring intervention from a human teacher. There is a close relationship between intelligent tutoring, cognitive learning theories and design; and there is ongoing research to improve the effectiveness of ITS. ITSs have the common goal of enabling learning in a meaningful and effective manner by using a variety of computing technologies
