

Engineering Hydrology By K Subramanya Free

Drainage basin p. 298. "EN A drainage basin is an area of land in which all flowing surface water converges to a single point, such as a river mouth, or flows into another body of water, such as a lake or ocean. Subramanya, K (2008). ISBN 978-0-07-064855-5. A basin is separated from adjacent basins by a perimeter, the drainage divide, made up of a succession of elevated features, such as ridges and hills. Archived (PDF) from the original on Jan 18, 2024 - via HAL. A basin may consist of smaller basins that merge at river confluences, forming a hierarchical pattern. Tata McGraw-Hill. Dakshina Kannada Dakshina Kannada receives abundant rainfall during the Indian monsoon. The district covers an area nestled in between the Western Ghats to its east and the Arabian Sea to its west. According to the 17th-century Dakshina Kannada district is located in the state of Karnataka in India, with its headquarters in the coastal city of Mangaluru. It is the only district in Karnataka state to have all modes of transport like road, rail, water and air due to the presence of a major hub, Mangaluru. This financial district. According to the 2011 census of India, Dakshina Kannada district had a population of 2,089,649. According to legend, the district was reclaimed by Parashurama from the sea. of Dakshina Kannada worship the Serpent God Subramanya. It is bordered by Udupi district (formerly a part of this district) to the north, Chikmagalur district to the northeast, Hassan district to the east, Kodagu to the southeast and Kasaragod district of Kerala to the south 72f514119e

Other terms for a drainage basin are catchment area, catchment basin, drainage area, river basin, water basin, and impluvium. In North America, they are commonly called a watershed, though in other English-speaking places, "watershed" is used only in its original sense, that of the drainage divide line. 72f514119e A drainage basin's boundaries are determined by watershed... 72f514119e

Isochrone map An isochrone (iso = equal, chrone = time) is defined as "a line drawn on a map connecting points at which something occurs or arrives at the same time". Subramanya, An isochrone map in geography and urban planning is a map that depicts the area accessible from a point within a certain time threshold. In hydrology and transportation planning isochrone maps are commonly used to depict areas of equal travel time. Copernicus Publications: 265-281. 2. The term is also used in cardiology as a tool to visually detect abnormalities using body surface distribution. 5194/hess-2-265-1998. 265B. 2 (2/3). Hydrology and Earth System Sciences. doi:10.
