Traffic message channel The look-up tables must be implemented in a service-specific database Traffic Message Channel (TMC) is a technology for delivering traffic and travel information to motor vehicle drivers. Both public and commercial services are operational in many countries. The results can be translated into audio or visually displayed on a Sat nav device. It is digitally coded using the ALERT C or TPEG protocol into Radio Data System (RDS) carried via conventional FM radio broadcasts. When data is integrated directly into a navigation system, traffic information can be used in the system's route calculation. It can also be transmitted on Digital Audio Broadcasting or satellite radio. TMC allows silent delivery of dynamic information suitable for reproduction or display in the user's language without interrupting audio broadcast services. locations 6fc5810407
