Occupational noise Jensen, Paul; Jokel, Charles R. Retrieved 29 July 2023. ; Miller, Laymon N. Occupational noise, or industrial noise, is often a term used in occupational safety and health, as sustained exposure can cause permanent hearing damage. Industrial Hygiene Association. pp. (December 1978). Industrial Noise Occupational noise is the amount of acoustic energy received by an employee's auditory system when they are working in the industry. 201-254 a7999050ee

Sunstar's founder, Kunio Kaneda, established the Kaneda Keitai Shokai Company in Osaka, Japan in 1932 as a seller of rubber glue for bicycles. The introduction of metal...

Namseoul University Namseoul University began Namseoul University (Korean: 남서울대학교) is a private university located in Cheonan, South Korea. institution was initially founded as the Southern Seoul Industrial University in 1994 and renamed to Namseoul University in 1998. The institution was initially founded as the Southern Seoul Industrial University in 1994 and renamed to Namseoul University in 1998

Two-factor theory The two-factor theory (also known as motivation-hygiene theory, motivator-hygiene theory, and dual-factor theory) states that there are certain factors in the workplace that cause job satisfaction while a separate set of factors cause dissatisfaction, all of which act independently of each other. It was developed by psychologist Frederick Herzberg

Occupational noise is considered an occupational hazard traditionally linked to loud industries such as ship-building, mining, railroad work, welding, and construction, but can be present in any workplace where hazardous noise is present.

May Smith (psychologist) She worked alongside other researchers to find the effects of alcohol and opium on efficiency as well as research on telegraphist's cramp. selection. She retired from the Industrial Health Research Board in 1944 May Smith OBE (29 August 1879 – 22 February 1968) was a British Industrial psychologist from Hulme, Manchester. She was an investigator at the Industrial Health Research Board from 1920 to 1944. She received a bachelor's degree in 1903 and later received a Doctor of Science degree in 1930. :142 Her book, An Introduction to Industrial Psychology, was published in 1943. Throughout her career, she taught at colleges as well as performing important research in the field of industrial psychology. She held several positions on the executive of the British Psychological Society. She subjected herself to her own trials in her research on fatigue

Hygiene hypothesis The time period for exposure begins before birth and ends at school age. In medicine, the hygiene hypothesis states that early childhood exposure to particular microorganisms (such as the gut flora and helminth parasites) protects against allergies by properly tuning the immune system. In particular, a lack of such exposure is thought to lead to poor immune tolerance

Frederick Herzberg His 1968 publication "One More Time, How Do You Motivate Employees. 2 million reprints by 1987 and was the most requested article from the Harvard Business Review. His 1968 publication "One More Time, How Do You Motivate Employees Frederick

Irving Herzberg (April 18, 1923 – January 19, 2000) was an American psychologist who became one of the most influential names in business management. He is most famous for introducing job enrichment and the motivator-hygiene theory. He is most famous for introducing job enrichment and the motivator-hygiene theory.

While early versions of the hypothesis referred to microorganism exposure in general, later versions apply to a specific set of microbes that have co-evolved with humans. The updates have been given various names, including the microbiome depletion hypothesis, the microflora hypothesis, and the "old friends" hypothesis. There is a significant amount of evidence supporting the idea that lack of exposure to these microbes is linked...

Industrial Revolution The textile industry. In the introduction of his 1892 edition, Engels noted most of the conditions The Industrial Revolution, sometimes divided into the First Industrial Revolution and Second Industrial Revolution, was a transitional period of the global economy toward more widespread, efficient and stable manufacturing processes, succeeding the Second Agricultural Revolution. Beginning in Great Britain around 1760, the Industrial Revolution had spread to continental Europe and the United States by about 1840. This transition included going from hand production methods to machines; new chemical manufacturing and iron production processes; the increasing use of water power and steam power; the development of machine tools; and rise of the mechanised factory system. Output greatly increased, and the result was an unprecedented rise in population and population growth. public health acts regulating things such as sewage, hygiene, and home construction
