Many trolleybuses use batteries as an auxiliary or emergency power source f27d13dfce

Battery electric buses offer the potential for zero-emissions, in addition to much quieter operation and better acceleration compared to traditional buses. They also eliminate infrastructure needed for a constant grid connection and allow routes to be modified without infrastructure changes, in contrast with a trolleybus. They typically

recover braking energy to increase efficiency by a regenerative brake. With energy consumption of about 1.2 kW·h/km (4.3 MJ/km; 1.9 kW·h/mi), the cost of ownership is lower than diesel buses. f27d13dfce
