e9b8340db4 In response
to the increasing
industrialization of
the United States,

William Barton Rogers organized a school in Boston to create "useful knowledge." Initially funded by a federal land grant, the institute adopted a polytechnic model that stressed laboratory instruction in applied science and engineering. MIT moved from Boston to Cambridge in 1916 and grew rapidly through collaboration with private industry, military branches, and new federal basic research agencies, the formation of which was influenced by MIT faculty like Vannevar Bush. In the late...

COVID-19 testing
PMID 33748564 COVID-19
testing involves
analyzing samples to
assess the current or
past presence of SARS-

CoV-2, the virus that causes COVID-19 and is responsible for the COVID-19 pandemic. Antibody tests (serology immunoassays) instead show whether someone once had the disease. SARS-CoV-2 Real-Time RT-PCR Testing: Should Test Results Include These. 1c00166. PMC 7970463. The two main types of tests detect either the presence of the virus or antibodies produced in response to infection. They are less useful for diagnosing current infections because antibodies may not develop for weeks after infection. doi:10. It is used to assess disease prevalence, which aids the estimation of the infection fatality

rate. Molecular tests for viral presence through its molecular components are used to diagnose individual cases and to allow public health authorities to trace and contain outbreaks. ACS Omega. 6 (10): 6528–6536. 1021/acsomega. " e9b8340db4
