Health psychology The discipline is concerned with understanding how psychological, behavioral, and cultural factors contribute to physical health and illness. Psychological factors can affect health directly. Health psychologists take a biopsychosocial approach. For example, certain behaviors can, over time, harm (smoking or consuming excessive amounts of alcohol) or enhance (engaging in exercise) health. For example, chronically occurring environmental stressors affecting the hypothalamic-pituitary-adrenal axis, cumulatively, can harm health. can be effective. In other words, health psychologists understand health to be the product not only of biological processes. Behavioral factors can also affect a person's health.
