

Corporate Computer Security 3rd Edition

To meet these needs, a system administrator may acquire, install, or upgrade computer components and software; provide routine automation; maintain security policies; troubleshoot; train or supervise staff; or offer technical support for projects. The right to study and modify a computer program entails that the source code—the preferred format for making changes—be made available to users of that program. While...

Free software Computer programs are deemed "free" if they give end-users (not just the developer) ultimate control over the software and, subsequently, over their devices. Free software is a matter of liberty, not price; all users are legally free to do what they want with their copies of free software (including profiting from them) regardless of how much is paid to obtain the program. donations, crowdfunding, corporate contributions, and tax money. The SELinux project at the United States National Security Agency is an example of a Free software, libre software, libreware sometimes known as freedom-respecting software is computer software distributed under terms that allow users to run the software for any purpose as well as to study, change, and distribute it and any adapted versions

NeXT The series had relatively limited sales, with only about 50,000 total units shipped. It was founded in 1985 by Steve Jobs, the Apple Computer co-founder who had been removed from Apple that year. Nevertheless, the object-oriented programming and graphical user interface were highly influential trendsetters of computer innovation. Longstanding controversy surrounds the meaning of the term "hacker". In this controversy, computer programmers reclaim the term hacker, arguing that it refers simply to someone with an advanced understanding of computers and computer networks, and that cracker is the more appropriate term for those who break into computers, whether computer criminals (black hats) or computer security experts (white... c44edbdb3d

Distributed database organised network servers or decentralised independent computers on the Internet, on corporate intranets or extranets, or on other organisation networks A distributed database is a database in which data is stored across different physical locations. g. Unlike parallel systems, in which the processors are tightly coupled and constitute a single database system, a distributed database system consists of loosely coupled sites that share no physical components. It may be stored in multiple computers located in the same physical location (e. a data centre); or maybe dispersed over a network of interconnected computers c44edbdb3d

Secure communication In 1898, Secure communication is when two entities are communicating and do not want a third party to listen in. Secure communication includes means by which people can share information with varying degrees of certainty that third parties cannot intercept what is said. present development that achieves security in general at the potential cost of compelling obligatory trust in corporate and government bodies. For this to be the case, the entities need to communicate in a way that is unsusceptible to eavesdropping or interception. Other than spoken face-to-face communication with no possible eavesdropper, it is probable that no communication is guaranteed to be secure in this sense, although practical obstacles such as legislation, resources, technical issues (interception and encryption), and the sheer volume of communication serve to limit surveillance c44edb3d
