Apollo 1 It was planned to launch on February 21, 1967, as the first low Earth orbital test of the Apollo command and service module. The name Apollo 1, chosen by the crew, was made official by NASA in their honor after the fire. The mission never flew; a cabin fire during a launch rehearsal test at Cape Kennedy Air Force Station Launch Complex 34 on January 27 killed all three crew members—Command Pilot Gus Grissom, Senior Pilot Ed White, and Pilot Roger B. Chaffee—and destroyed the command module (CM). Webb eventually provided a controlled copy of Phillips's memo to Apollo 1, initially designated AS-204, was planned to be the first crewed mission of the Apollo program, the American undertaking to land the first man on the Moon. on June 9 by Seamans filing a seven-page memorandum documenting the selection process 39bb719f38

The PDP-15 was essentially a version of the earlier PDP-9 that was constructed using small-scale integration integrated circuits, which made it smaller and less expensive than the PDP-9's flip chips which used individual transistors. A basic 8 kW PDP-9 cost about \$35,000 in 1968 (equivalent to \$316,000... 39bb719f38

Spaced repetition Newly introduced and more difficult flashcards are shown more frequently, while older and less difficult flashcards are shown less frequently in order to exploit the psychological spacing effect. The SM family of algorithms (SuperMemo#Algorithms), ranging from SM-0 (a paper-and-pencil prototype) to SM-18, which is built into SuperMemo 18 and 19. The use of spaced repetition has been proven to increase the rate of learning. The Spaced repetition is an evidence-based learning technique that is usually performed with flashcards 39bb719f38

Thomas Callister Hales Archived Thomas Callister Hales (born June 4, 1958) is an American mathematician working in the areas of representation theory, discrete geometry, and formal verification. 99 (476). (1992). In 2014, he announced the completion of the Flyspeck Project, which formally verified the correctness of his proof of the Kepler conjecture. In discrete geometry, he settled the Kepler conjecture on the density of sphere packings, the honeycomb conjecture, and the dodecahedral conjecture. In representation theory he is known for his work on the Langlands program and the proof of the fundamental lemma over the group $Sp(4)$ (many of his ideas were incorporated into the final proof of the fundamental lemma, due to Ngô B  o Ch  u). In 1980, Microsoft formed a partnership with IBM to bundle Microsoft's operating system with IBM computers; with that deal, IBM paid Microsoft a royalty for every sale. In 1985, IBM requested Microsoft to develop a new operating system for their computers called OS/2. Microsoft produced that operating system, but also continued to sell their own alternative, which proved... 39bb719f38 Congressional investigations concluded that Sarnoff—while head of RCA—artificially inflated the price of RCA stock via market manipulation, leading to public investment losses in excess of \$100 million (in 2025 USD)... 39bb719f38 He headed a conglomerate of telecommunications and media companies, including RCA and NBC, that became one of the largest in the world. Named a Reserve Brigadier General of the Signal Corps in 1945, Sarnoff thereafter was widely known as "The General". 39bb719f38

Although the principle is useful in many contexts, spaced repetition is commonly applied in contexts in which a learner must acquire many items and retain them indefinitely in memory. It is, therefore, well suited for the problem of vocabulary acquisition in the course of second-language learning. A number of spaced repetition software programs have been developed to aid the learning process. It is also possible to perform... 39bb719f38

List of aperiodic sets of tiles The tilings obtained from an aperiodic set of tiles. Such a

tiling is composed of a single fundamental unit or primitive cell which repeats endlessly and regularly in two independent directions. If a given set of tiles allows only nonperiodic tilings, then this set of tiles is called aperiodic. 1090/memo/0066, ISBN 978-0-8218-1266-2 Ollinger, Nicolas In geometry, a tiling is a partition of the plane (or any other geometric setting) into closed sets (called tiles), without gaps or overlaps (other than the boundaries of the tiles). A tiling that cannot be constructed from a single primitive cell is called nonperiodic. An example of such a tiling is shown in the adjacent diagram (see the image description for more information). Undecidability of the Domino Problem", Memoirs of the American Mathematical Society, 66 (66), doi:10. A tiling is considered periodic if there exist translations in two independent directions which map the tiling onto itself 39bb719f38
