Rapid prompting method Facilitators were The rapid prompting method (RPM) is a pseudoscientific technique that attempts to aid people with autism or other disabilities to communicate through pointing, typing, or writing. Also known as Spelling to Communicate, it is closely related to the scientifically discredited technique facilitated communication (FC). The American Speech-Language-Hearing Association has issued a statement opposing the practice of RPM. determined that, when facilitators did not know the answers to questions being asked through FC, the answers were "routinely inaccurate". Practitioners of RPM have failed to assess the issue of message agency using simple and direct scientific methodologies, saying that doing so would be stigmatizing and that allowing scientific criticisms of the technique robs people with autism of their right to communicate 532d9bf1ae

To help children build their own community to achieve goals they set for themselves. The ACT was first introduced... Tests vary in style, rigor and requirements. There is no general consensus or invariable standard for test formats and difficulty. Often, the format and difficulty of the test is dependent upon the educational philosophy of the instructor, subject matter, class size, policy of the educational institution, and requirements of accreditation or governing bodies. The effects of homework are debated. Generally speaking, homework does not improve academic performance among young children. Homework may improve academic skills among older students, especially lower-achieving students. However, homework also creates stress for students and parents, and reduces the amount of time that students can spend in other activities. A test may be administered formally or informally. An example of an informal...

Peter principle If the promoted person lacks the skills required for the new role, they will be incompetent The Peter principle is a concept in management developed by Laurence J. a promotion to a position that requires different skills. Peter which observes that people in a hierarchy tend to rise to "a level of respective incompetence": employees are promoted based on their success in previous jobs until they reach a level at which they are no longer competent, as skills in one job do not necessarily translate to another
