The M8 AGS began as a private venture of FMC Corporation, called the close combat vehicle light (CCVL), in 1983. The Army began the armored gun system program to develop a mobile gun platform that could be airdropped. By 1992, the AGS was one of the Army's top priority acquisition programs. The service selected FMC's CCVL over proposals from three other teams. The service sought to purchase 237 AGS systems to begin fielding in 1997. Key characteristics of the AGS are its light weight (17.8 short tons (16.1 t) in its low-velocity... 6d82e5c33b Assembled almost entirely from bought in OEM component parts (e.g., the KB 2400 cab shell from the Berliet GR/TR, engines from Cummins, transmission from Eaton) it was introduced to fill a perceived gap in the market in anticipation of the relaxation of weight restrictions on HGVs, and as such had a very strong chassis and heavy duty suspension. The

Most trucks had gasoline (G) engines until the early 1960s, when multifuel (M) and diesel (D) engines were introduced. Since then diesel fuel has increasingly been used, the last gasoline engine vehicles were built in 1985. 6d82e5c33b Some common deep learning network architectures include fully connected networks, deep belief networks, recurrent neural networks, convolutional neural networks, generative adversarial networks, transformers, and neural radiance fields.
