Rapid prompting method is, purportedly, “the most direct and unlimited path to learning and communicating. “ RPM proponents point to the “sole study of RPM”, “Harnessing repetitive The rapid prompting method (RPM) is a pseudoscientific technique that attempts to aid people with autism or other disabilities to communicate through pointing, typing, or writing. Practitioners of RPM have failed to assess the issue of message agency using simple and direct scientific methodologies, saying that doing so would be stigmatizing and that allowing scientific criticisms of the technique robs people with autism of their right to communicate. Also known as Spelling to Communicate, it is closely related to the scientifically discredited technique facilitated communication (FC). The American Speech-Language-Hearing Association has issued a statement opposing the practice of RPM

Science communication Examples of outreach include science journalism and health communication. Hype in science List of science communicators Public awareness of science Science-to-business marketing Communicating science: a global perspective. Since science has political, moral, and. Toss Science communication encompasses a wide range of activities that connect science and society. The term "science communication" generally refers to settings in which audiences are not experts on the scientific topic being discussed (outreach), though some authors categorize expert-to-expert communication ("inreach" such as publication in scientific journals) as a type of science communication. Common goals of science communication include informing non-experts about scientific findings, raising the public awareness of and interest in science, influencing people's attitudes and behaviors, informing public policy, and engaging with diverse communities to address societal problems
