Plastic recycling Recycling can reduce dependence on landfills, conserve resources and protect the environment from plastic pollution and greenhouse gas emissions. "Study on dechlorination technology Plastic recycling is the processing of plastic waste into other products. 3 billion tonnes of plastic waste, only 9% of which has been recycled and only ~1% has been recycled more than once. Recycling rates lag behind those of other recoverable materials, such as aluminium, glass and paper. Of the remaining waste, 12% was incinerated and 79% was either sent to landfills or lost to the environment as pollution.
