Brain-computer interface They are often conceptualized as a human-machine interface that skips the intermediary of moving body parts (e. BCIs are often directed at researching, mapping, assisting, augmenting, or repairing human cognitive or sensory-motor functions. BCI implementations range from non-invasive (EEG, MEG, MRI) and partially invasive (ECoG and endovascular) to invasive (microelectrode array), based on how physically close electrodes are to

Weekend effect The effects of the weekend on patient outcomes has been a concern since the late 1970s, and a 'weekend effect' is now well documented. After controlling for patient risk and surgery type, weekend In healthcare, the weekend effect is the finding of a difference in mortality rate for patients admitted to hospital for treatment at the weekend compared to those admitted on a weekday. aneurysm, endovascular repair of abdominal aortic aneurysm, and lower extremity revascularisation. Although this is a controversial area, the balance of opinion is that the weekend (and bank holidays) have a deleterious effect on patient care (and specifically increase mortality)—based on the larger studies that have been carried out. Variations in the

outcomes for patients treated for many acute and chronic conditions have been studied bb65a6f98a

Clinical trial Clinical trials generate data on dosage, safety and efficacy. These authorities are responsible for vetting the risk/benefit ratio of the trial—their approval does not mean the therapy is 'safe' or effective, only that the trial may be conducted. They are conducted only after they have received health authority/ethics committee approval in the country where approval of the therapy is sought. each other. An example of the former in the field of vascular surgery is the Open versus Endovascular Repair (OVER trial) for the treatment of abdominal Clinical trials are prospective biomedical or behavioral research studies on human participants designed to answer specific questions about biomedical or behavioral interventions, including new treatments (such as novel vaccines, drugs, dietary choices, dietary supplements, and medical devices) and known interventions that warrant further study and comparison bb65a6f98a

Obesity 33 (2): 223–33. People are classified as obese when their body mass index (BMI)—a person's weight divided by the square of the person's height—is over 30 kg/m²; the range 25–30 kg/m² is defined as overweight. Bradbury AW, Adam DJ (February 2007). 2006 Obesity is a medical condition, considered by multiple organizations to be a disease, in which excess body fat has accumulated to such an extent that it can have negative effects on health. European Journal of Vascular and Endovascular Surgery. ejvs. "Obesity and thrombosis". 1016/j. doi:10. Some East Asian countries use lower values to calculate obesity. Obesity is a major cause of disability and is correlated with various diseases and conditions, particularly cardiovascular diseases, type 2 diabetes, obstructive sleep apnea, certain types of cancer, and osteoarthritis bb65a6f98a

Intestinal ischemia PMID 15833694. doi:10. 1016/j. 283–95. (2007). Vascular surgery. bpg. p.

The chronic form typically presents more gradually with abdominal pain after eating, unintentional weight loss, vomiting, and fear of eating. 2004. Onset can be sudden, known as acute intestinal ischemia, or gradual, known as chronic intestinal ischemia. Archived from

Intestinal ischemia is a medical condition in which injury to the large or small intestine occurs due to inadequate blood supply. D. 420. The acute form of the disease often presents with sudden severe abdominal pain and is associated with a high risk of death. Liapis, C. 11. ISBN 9783540309567. 002. Berlin: Springer bb65a6f98a

pulmonary artery that supplies blood to the lungs. This is called a pulmonary embolism (PE). DVT and PE comprise the cardiovascular disease of venous thromboembolism (VTE). bb65a6f98a

List of skin conditions The major function of this system is as a barrier against the external environment. The two main types of human skin are: glabrous skin, the hairless skin on the palms and soles (also referred to as the "palmoplantar" surfaces), and hair-bearing skin. In the embryo, the epidermis, hair,. Within the latter type, the hairs occur in structures called pilosebaceous units, each with hair follicle, sebaceous gland, and associated arrector pili muscle. dorsi
Endovascular papillary angioendothelioma (Dabska tumor, Dabska-type hemangioendothelioma, hobnail hemangioendothelioma, malignant endovascular papillary Many skin conditions affect the human integumentary system—the organ system covering the entire surface of the body and composed of skin, hair, nails, and related muscles and glands. The skin weighs an average of four kilograms, covers an area of two square metres, and is made of three distinct layers: the epidermis, dermis, and subcutaneous tissue

1177/1538574410388309. Vascular and Endovascular Surgery. "Trends in management of phlegmasia cerulea dolens". PMID 21193462 Deep vein thrombosis (DVT) is a type of venous thrombosis involving the formation of a blood clot in a deep vein, most commonly in the legs or pelvis. 45 (1): 5-14. A minority of DVTs occur in the arms. Symptoms can include pain, swelling, redness, and enlarged veins in the affected area, but some DVTs have no symptoms. doi:10.1016/j.bb65a6f98a

Risk factors for acute intestinal ischemia include atrial fibrillation, heart failure, chronic kidney failure, being prone to forming blood clots, and previous myocardial infarction. There are four mechanisms by which poor blood flow occurs: a blood clot from elsewhere getting lodged in an artery... bb65a6f98a
