 b56ee952c2 Reference Sheet \u0026 Calculator Tips b56ee952c2 3. What are the best
 resources and study guides to use to prepare for the K-6 exam? b56ee952c2 A: The
 addition of energy causes a phase change. Phase changes are physical changes, not
 chemical changes. While sublimation is an example of a phase change, it occurs when

a solid turns directly into a gas without passing through the liquid state. Condensation, another phase change, occurs when a gas turns to liquid. Intro C: A physical change occurs when water condenses. The only thing formed during condensation is new intermolecular bonds. Therefore, no new covalent bonds form (B). The only time new atoms form is during a nuclear reaction (A). The water molecule is not ionizing, so no new ionic bonds form (D).
