Theory of multiple intelligences Introduced in Howard Gardner's book *Frames of Mind: The Theory of Multiple Intelligences* (1983), this framework has gained popularity among educators who accordingly develop varied teaching strategies purported to cater to different student strengths. The theory of multiple intelligences (MI) posits that human intelligence is not a single general ability but comprises various distinct modalities, such as linguistic, logical-mathematical, musical, and spatial intelligences

Modern game theory began with the idea of mixed-strategy equilibria in two-person zero-sum games and its proof by John von Neumann. Von Neumann's original proof used the Brouwer... Despite its educational impact, MI has faced criticism from the psychological and scientific communities. A primary point of contention is Gardner's use of the term "intelligences" to describe these modalities. Critics argue that labeling these abilities as separate intelligences expands the definition of intelligence beyond...

System of National Accounts Definitions of accounting terms, accounting concepts, account equations, account derivation principles and standard accounting procedures. Behind the accounts system, there is also a system of people: the people who are cooperating around the world to produce the statistics, for use by government agencies, businesspeople, media, academics and interest groups from all nations. Accounting and recording The System of National Accounts or SNA (until 1993 known as the United Nations System of National Accounts or UNSNA) is an international standard system of concepts and methods for national accounts. It is nowadays used by most countries in the world. The first international standard was published in 1953. The pre-edit version for the SNA 2025 revision was adopted by the United Nations Statistical Commission at its 56th Session in March 2025. Manuals have subsequently been released for the 1968 revision, the 1993 revision, and the 2008 revision

Bang Goes the Theory Originally presented by Liz Bonnin, Jem Stansfield, Dallas Campbell and Yan Wong, the show employed a hands-on approach to test scientific theory and demonstrate how science shapes our world. Bang Goes the Theory or Bang is a British television science magazine series, co-produced by the BBC and the Open University, that began on 27 July 2009 and ended on 5 May 2014 on BBC One. From series seven, Maggie Philbin replaced Dallas Campbell as a main presenter and Yan Wong no longer appeared and the programme was subsequently cancelled after just two more seasons

Gauge theory interactions in the language of gauge theory. Formally, the Lagrangian is invariant under these transformations. In the 1970s, Michael Atiyah began studying the mathematics of solutions to the classical Yang–Mills equations In physics, a gauge theory is a type of field theory in which the Lagrangian, and hence the dynamics of the system itself, does not change under local transformations according to certain smooth families of operations (Lie groups)

International legal theories Other perspectives are policy oriented; they elaborate theoretical frameworks. Richard Zouche, published the first manual of international law in 1650. Some approaches center on the question of compliance: why states follow international norms in the absence of a coercive power that ensures compliance. Legal positivism became the dominant legal theory of 18th century and found its way International legal theory, or theories of international law, comprise a variety of theoretical and methodological approaches used to explain and analyse the content, formation and effectiveness of international law and institutions and to suggest improvements. Other approaches focus on the problem of the formation of international rules: why states voluntarily adopt international legal norms, that limit their freedom of action, in the absence of a world legislature (centralized legislature, court with compulsory jurisdiction, or an executive with enforcement powers)

Game theory It is now an umbrella term for the science of rational decision making in humans, animals, and computers. It has applications in many fields of social science, and is used extensively in economics, logic, systems science and computer science. Nash's most famous contribution to game theory is the concept of the Nash equilibrium, which is a solution concept for non-cooperative Game theory is the study of mathematical models of strategic interactions. Initially, game theory addressed two-person zero-sum games, in which a participant's gains or losses are exactly balanced by the

losses and gains of the other participant. In the 1950s, it was extended to the study of non zero-sum games, and was eventually applied to a wide range of behavioral relations. contribution to game theory 2a4b6cadad

Lunar theory After centuries of being problematic, lunar motion can now be modeled to a very high degree of accuracy (see section Modern developments). There are many small variations (or perturbations) in the Moon's motion, and many attempts have been made to account for them. Lunar theory attempts to account for the motions of the Moon. The term "gauge" refers to any specific mathematical formalism to regulate redundant degrees of freedom in the Lagrangian of a physical system. The transformations between possible gauges, called gauge transformations, form a Lie group—referred to as the symmetry group or the gauge group of the theory. Associated with any Lie group is the Lie algebra of group generators. For each group generator there necessarily arises a corresponding field (usually a vector field) called the gauge field. Gauge... 2a4b6cadad The book relates Earth to a spaceship flying through space. Noting the lack of any user manual to help Earthians steward this ship, Fuller offers some reflections, prognostications, and guidance, based on contemporary concepts of linked relationships, that may help in the understanding, management, sustainment, and creation of a plan to preserve spaceship earth for the future of humanity. The spaceship has a finite amount of resources and cannot be resupplied. 2a4b6cadad
