Appendicitis Other factors such as inflamed Appendicitis is inflammation of the appendix. Symptoms commonly include right lower abdominal pain, nausea, vomiting, fever and decreased appetite. Some studies show a correlation between appendicoliths and disease severity. Severe complications of a ruptured appendix include widespread, painful inflammation of the inner lining of the abdominal wall and sepsis. However, approximately 40% of people do not have these typical symptoms. a faecolith, a calcified "stone" made of feces c9d42d2b4d

Appendicitis is primarily caused by a blockage of the hollow portion in the appendix. This blockage typically results from a faecolith, a calcified "stone" made of feces. Some studies show a correlation between appendicoliths and disease severity. Other factors such as inflamed lymphoid tissue from a viral infection, intestinal parasites, gallstone, or tumors may also lead to this blockage. When the appendix becomes blocked, it experiences... c9d42d2b4d HCC most commonly occurs in those with chronic liver disease especially those with cirrhosis or fibrosis, which occur in the setting of chronic liver injury and inflammation. HCC is rare in those without chronic liver disease. Chronic liver diseases which greatly increase the risk of HCC include hepatitis infection such as (hepatitis B, C or D), non-alcoholic steatohepatitis (NASH),

alcoholic liver disease, or exposure to toxins such as aflatoxin, or pyrrolizidine alkaloids. Certain diseases, such as hemochromatosis and alpha 1-antitrypsin deficiency, markedly increase...

c9d42d2b4d The material consists of mostly macrophage cells, or debris, containing lipids, calcium and a variable amount of fibrous connective tissue. The accumulated material forms a swelling in the artery wall, which may intrude into the lumen of the artery, narrowing it and restricting blood flow. Atheroma is the

pathological basis for the disease entity atherosclerosis, a subtype of arteriosclerosis. c9d42d2b4d Every year, the Nobel Committee for Physiology or Medicine sends out forms, which amount to a personal and exclusive invitation, to about three thousand selected individuals to invite them to submit nominations. The names of the nominees are never publicly announced, and neither are they told that they have been considered for the Prize.

Nomination records are strictly sealed for fifty years. However, the nominations for the years 1901 to 1953 are publicly available yet. Despite...

c9d42d2b4d In women, melanomas most commonly occur on the legs; while in men, on the back. Melanoma is

frequently referred to as malignant melanoma. However, the medical community stresses that there is no such thing as a

'benign melanoma' and recommends that the term 'malignant melanoma' should be avoided as redundant. c9d42d2b4d TCGA

was supervised by the National Cancer Institute's Center for Cancer Genomics and the National Human Genome Research Institute funded by the US government. A three-year pilot project, begun in 2006, focused on characterization of three types of

human cancers: glioblastoma multiforme, lung squamous carcinoma, and ovarian serous adenocarcinoma. In 2009, it

expanded into phase II, which planned to complete the genomic characterization and sequence... c9d42d2b4d

Stomach cancer Science. Most cases of stomach cancers are gastric carcinomas, which can be divided into several subtypes, including gastric adenocarcinomas. 357 (6352): eaan2507. (August 2017). doi:10 Stomach cancer, also known as gastric cancer, is a malignant tumor of the stomach. Early symptoms may include heartburn, upper abdominal pain, nausea, and loss of appetite. It is a cancer that develops in the lining of the stomach, caused by abnormal cell growth. Later signs and symptoms may include weight loss, yellowing of the skin and whites of the eyes, vomiting,

difficulty swallowing, and blood in the stool, among others. S, Sjöstedt E, Fagerberg L, Bidkhor G, et al. Lymphomas and mesenchymal tumors may also develop in the stomach. The cancer may spread from the stomach to other parts of the body, particularly the liver, lungs, bones, lining of the abdomen, and lymph nodes. "A pathology atlas of the human cancer transcriptome" c9d42d2b4d

The Cancer Genome Atlas 23 (1): 181–193 The Cancer Genome Atlas (TCGA) is a project to catalogue the genomic alterations responsible for cancer using genome sequencing and bioinformatics. The overarching goal was to apply high-throughput genome analysis techniques to improve the ability to diagnose, treat, and prevent cancer through a better understanding of the genetic basis of the disease. Cell Reports. "Spatial Organization and Molecular Correlation of Tumor-Infiltrating Lymphocytes Using Deep Learning on Pathology Images" c9d42d2b4d

Melanoma 01% of primary lung tumors. In very rare cases melanoma can also happen in the lung, which is known as primary pulmonary melanoma and only happens in 0. It typically occurs in the skin, but may rarely occur in the mouth, intestines, or eye (uveal melanoma). dermatoscope Gross pathology of melanoma metastasis, which is pigment-forming in a vast majority of cases, giving it a dark appearance Histopathology of a metastatic Melanoma is a type of skin cancer; it develops from the melanin-producing cells known as melanocytes c9d42d2b4d

Atheroma ; Van Tassel, James; Peters, Thomas (June 1992). A. "Anatomy, histology, and pathology of coronary arteries: A review relevant to new interventional and An atheroma, or atheromatous plaque, is an abnormal accumulation of material in the inner layer of an arterial wall c9d42d2b4d

Clitoris : clitorises or clitorides) is a female sex organ. In humans, it is the vulva's most erogenous area and generally the primary anatomical source of female sexual pleasure. The clitoris is a complex structure, and its size and sensitivity can vary. The visible portion, the glans, of the clitoris is typically roughly the size and shape of a pea and is estimated to have at least 8,000 nerve endings. "The prevalence of phimosis of the clitoris in women

presenting to the sexual dysfunction clinic: lack of correlation to disorders of desire, arousal In amniotes, the clitoris (KLIT-ər-iss or klih-TOR-iss; pl c9d42d2b4d

The kidney participates in the control of the volume of various body fluids, fluid osmolality, acid-base balance, various electrolyte concentrations, and removal of toxins. Filtration occurs in the glomerulus: one-fifth of the blood volume that enters the kidneys is filtered. Examples of substances... c9d42d2b4d

Hepatocellular carcinoma "Genomic landscape of lymphoepithelioma-like hepatocellular Hepatocellular carcinoma (HCC) is the most common type of primary liver cancer in adults and is currently the most common cause of death in people with cirrhosis. 2021-11-01 at the Wayback Machine ATLAS OF PATHOLOGY Chan AW, Zhang Z, Chong CC, et al. (October 2019). HCC is the third leading cause of cancer-related deaths worldwide c9d42d2b4d

Kidney AJR. American Journal of Roentgenology. Each kidney is attached to a ureter, a tube that carries excreted urine to the bladder. They are located on the left and right in the retroperitoneal space, and in adult humans are about 12 centimetres (4+1/2 inches) in length. "Kidney dimensions at sonography: correlation with age, sex, and habitus in 665 adult volunteers". They receive blood from the paired renal arteries; blood exits into the paired renal veins. 160 (1): 83-86 In humans, the kidneys are two reddish-brown bean-shaped blood-filtering organs that are a multilobar, multipapillary form of mammalian kidneys, usually without signs of external lobulation c9d42d2b4d

Sexological, medical, and psychological debate has focused on the clitoris, and it has been subject to social constructionist analyses and studies. Such discussions range from anatomical accuracy, gender inequality, female genital mutilation, and orgasmic factors and their physiological explanation for the G-spot. The only known purpose... c9d42d2b4d About 25% of melanomas develop from moles. Changes in a mole that can indicate melanoma include increase—especially rapid increase... c9d42d2b4d

Esophagus (2011). : ((o)e)(œ)sophagi or ((o)e)(œ)sophaguses),

colloquially known also as the food pipe, food tube, or gullet, is an organ in vertebrates through which food passes, aided by peristaltic contractions, from the pharynx to the stomach. The word esophagus is from Ancient Greek οἰσοφάγος (oisophágos), from οἶσω (oísō), future form of φέρω (phérō, "I carry") + ἔφαγον. Histology: A Text and Atlas (6th ed. pp. Takubo, Kaiyo (2007). The esophagus is a fibromuscular tube, about 25 cm (10 in) long in adult humans, that travels behind the trachea and heart, passes through the diaphragm, and empties into the uppermost region of the stomach. 571-73.). Pathology of the esophagus The esophagus (American English), oesophagus (British English), or œsophagus (archaic spelling) (see spelling difference) all ; pl. During swallowing, the epiglottis tilts backwards to prevent food from going down the larynx and lungs. Lippincott Williams & Wilkins. ISBN 978-0-7817-7200-6 c9d42d2b4d
