Cross product "Definition In mathematics, the cross product or vector product (occasionally directed area product, to emphasize its geometric significance) is a binary operation on two vectors in a three-dimensional oriented Euclidean vector space (named here. E a4688e2005 . Given two linearly independent vectors a and b , the cross product, $a \times b$ (read "a cross b"), is a vector that is perpendicular to both a and b , and thus normal to the plane containing them. It has many applications in mathematics, physics, engineering, and computer programming. It should not be confused with the dot product (projection product).
