Many Let's Read and Find Out titles have either been reillustrated (sometimes more than once) or reissued under different titles. Some of these titles may be duplicates because of the renaming.

Frank and Ramus (1995) invented the name Veragua robber frog for use in English for the taxon *Eleutherodactylus biporcatus* (now the name of a Venezuelan species, but in 1995 the name for four other species of frog, including this one, see taxonomy), Veragua being a province of Colombia in the 1860s (now in central Panama) where in 1995 the holotype of *E. biporcatus* was thought to have been obtained. Because of the taxonomic reshuffling which occurred after Frank and Ramus coined the name "Veragua robber frog", their name is presently applied to *Craugastor rugosus*, despite the fact that it does not occur in Veraguas Province, and now shares this name with other species derived from *E. biporcatus*.

Special consideration must be given to measurement of depth given the effect of pressure on gauges.

**Altitude diving** Altitude is significant in diving because it affects the decompression requirement for a dive, so that the stop depths and decompression times used for dives at altitude are different from those used for the same dive profile at sea level. The U. Samples of the dead fish and the toads were sent to the Oceanographic Altitude diving is ambient pressure diving using scuba or surface supplied diving equipment where the surface is 300 metres (980 ft) or more above sea level (for example, a mountain lake). Navy tables recommend that no alteration be made for dives at altitudes lower than 91 metres (299 ft) and for dives between 91 and 300 meters correction is required for dives deeper than 44 metres (144 ft) of sea water. Most recently manufactured decompression computers can automatically compensate for altitude. many dead fish were found and collected. S. Large toads were also found and collected

In contrast to human paraphilias, many cases of animal necrophilia (also known as Davian behavior) have been observed, primarily as a result of being unable to distinguish between a receptive mate and a recently deceased one. Some species of arthropods and frogs can instead fully procreate with a recently killed mate.
