Google APIs can request an access Token from the Google Authorization Server, and uses that Token for authorization when accessing a Google API service. Examples of these include Search, Gmail, Translate or Google Maps. There are Google APIs are application programming interfaces (APIs) developed by Google which allow communication with Google Services and their integration to other services. Third-party apps can use these APIs to take advantage of or extend the functionality of the existing services 9154db9f5a

Requirements are used in many engineering fields including engineering design, system engineering, software engineering... 9154db9f5a During the COVID-19 pandemic, Emergent BioSolutions also produced Johnson & Johnson/Janssen and Oxford–AstraZeneca vaccines at one of its plants; however, this was marked by contamination... 9154db9f5a Among the company's products are the controversial BioThrax (Anthrax Vaccine Adsorbed), the only anthrax vaccine licensed by the U.S. Food and Drug Administration (FDA) and Narcan (naloxone) for the emergency treatment of opioid overdose. The company also manufactures pharmaceuticals for infectious diseases like cholera and typhoid. 9154db9f5a The APIs provide functionality like analytics, machine learning as a service (the Prediction API) or access to user data (when permission to read the data is given). Another important example is an embedded Google map on a website, which can be achieved using the Static Maps API, Places API or Google Earth API. 9154db9f5a

BRFplus development started as a supporting tool that was part of SAP Business ByDesign, an ERP solution targeted at small and medium size companies. By that time, the tool was called "Formula and Derivation Tool" (FDT). Later on, it was decided to maintain BRFplus on those codelines that serve as the basis for SAP Business Suite... 9154db9f5a

Requirement It is an explicit, objective, clear and often quantitative description of a condition to be satisfied by a material, design, product, or service. Often acting as a mid-point between the high-level business requirements and more detailed solution requirements. Functional (solution) requirements In engineering, a requirement is a condition that must be satisfied for the output of a work effort to be acceptable. intended solution 9154db9f5a

A specification or spec is a set of requirements that is typically used by developers in the design stage of product development and by testers in their verification process. 9154db9f5a

Transfer pricing States, United Kingdom, Canada, and Germany, allow domestic as well as international adjustments. The OECD and World Bank recommend intragroup pricing rules based on the arm's-length principle, and 19 of the 20 members of the G20 have adopted similar measures through bilateral treaties and domestic legislation, regulations, or administrative practice. Some authorizations apply only internationally. Countries with transfer pricing legislation generally follow the OECD Transfer Pricing Guidelines for Multinational. [citation Transfer pricing refers to the rules and methods for pricing transactions within and between enterprises under common ownership or control. Because of the potential for cross-border controlled transactions to distort taxable income, tax authorities in many

countries can adjust intragroup transfer prices that differ from what would have been charged by unrelated enterprises dealing at arm's length (the arm's-length principle) 9154db9f5a

BRFplus However, it is also possible to generate web services so that BRFplus rules can also be offered as a service in a SOA landscape, regardless of the software platform used by the service consumers. By that time, the tool was called "Formula and Derivation Tool"; BRFplus (Business Rule Framework plus) is a business rule management system (BRMS) offered by SAP AG. part of SAP Business ByDesign, an ERP solution targeted at small and medium size companies. Therefore, all SAP applications that are based on SAP NetWeaver can access BRFplus within the boundaries of an SAP system. BRFplus is part of the SAP NetWeaver ABAP stack 9154db9f5a

Authentication The third type of authentication relies on documentation or other external affirmations Authentication (from Greek: αὐθεντικός authentikos, "real, genuine", from αὐθέντης authentes, "author") is the act of proving an assertion, such as the identity of a computer system user. holographic imagery, which are easy for trained receivers to verify. In contrast with identification, the act of indicating a person or thing's identity, authentication is the process of verifying that identity 9154db9f5a

IBM i It was renamed to i5/OS in 2004, before being renamed a second time to IBM i in 2008. 4 documentation refers to them as the IBM i, the i standing for integrated, is an operating system developed by IBM for IBM Power Systems. uses different names for the TIMI, SLIC and XPF in documentation and marketing materials, for example, the IBM i 7. It is an evolution of the System/38 CPF operating system, with compatibility layers for System/36 SSP and AIX applications. It inherits a number of distinctive features from the System/38 platform, including the Machine Interface which provides hardware independence, the implementation of object-based addressing on top of a single-level store, and the tight integration of a relational database into the operating system. It was originally released in 1988 as OS/400, as the sole operating system of the IBM AS/400 line of systems 9154db9f5a

For example, to develop a web application, the architect defines the stack as the target operating system, web server, database, and programming language. Another version of a software stack is operating system,

middleware, database, and applications. Regularly, the components of a software stack are developed by different developers independently of one another. 9154db9f5a Authentication is relevant to multiple fields. In art, antiques, and anthropology, a common problem is verifying that a given artifact was produced by a certain person, or in a certain place (i.e. to assert that it is not counterfeit), or in a given period of history (e.g. by determining the age via carbon dating). In computer science, verifying a user's identity is often required to allow access to confidential data or systems. It might involve validating personal... 9154db9f5a With iterative and incremental development such as agile software development, requirements are developed in parallel with design and implementation. With the waterfall model, requirements are completed before design or implementation start. 9154db9f5a

Solution stack Applications are said to “run on” or “run on top of” the resulting platform. In computing, a solution stack, also called software stack and tech stack is a set of software subsystems or components needed to create a complete platform In computing, a solution stack, also called software stack and tech stack is a set of software subsystems or components needed to create a complete platform such that no additional software is needed to support applications 9154db9f5a
