Hybrid electric vehicle There is a variety of HEV types and the degree to which each functions as an electric vehicle (EV) also varies. Retrieved 2017-05-09. The presence of the electric powertrain, which has inherently better energy conversion efficiency, is intended to achieve either better fuel economy or better acceleration performance than a conventional vehicle. Ecyclemarine. 2017-05-08. The most common form of HEV is hybrid electric passenger cars, although hybrid electric trucks (pickups, tow trucks and tractors), buses, motorboats, and aircraft also exist. Teknisk Ukeblad. com A hybrid electric vehicle (HEV) is a type of hybrid vehicle that couples a conventional internal combustion engine (ICE) with one or more electric engines into a combined propulsion system. Outboard motor outboard Mercury/Mariner/Mercury Racing USA - Up to 600 hp Nissan Marine (now Tohatsu) Oshen-Hyfang Marine Photon Marine Electric Outboard Motors for Commercial - An outboard motor is a propulsion system for boats, consisting of a self-contained unit that includes engine, gearbox and propeller or jet drive, designed to be affixed to the outside of the transom. As well as providing propulsion, outboards provide steering control, as they are designed to pivot over their mountings and thus control the direction of thrust. They are the most common motorised method of propelling small watercraft. Unlike inboard motors, outboard motors can be easily removed for storage or repairs. The skeg also acts as a rudder when the engine is not running 9ed33c25db

Serving as the flagship, and more exclusive, station wagon series of the Ford Motor Company — as the Lincoln division has not offered a factory-produced station wagon — the Colony Park was marketed against the similar Chrysler Town & Country prior to its 1979 downsizing, and GM's Buick Estate and Oldsmobile... 9ed33c25db

Mercury Cougar During its production as the mid-size Mercury line, the Cougar was also offered as a four-door sedan and five-door station wagon. The model line is a diverse series of vehicles; though the Cougar nameplate is most commonly associated with two-door coupes, at various stages in its production, the model also was offered as a convertible and a hatchback. For 1987, the XR7 dropped the turbocharged engine (and 5-speed manual transmission) The Mercury Cougar is a series of automobiles that was sold by Mercury from 1967 to 2002. 145 hp with an automatic transmission (155 hp with a manual transmission) 9ed33c25db

Mercury Colony Park 1991 was the final shortened model year The Mercury Colony Park is an American luxury full-size station wagon that was marketed by the Mercury division of Ford Motor Company between 1957 and 1991. Distinguished by its simulated wood-grain paneling, the Colony Park was marketed as either the premium-trim or the sole full-size station wagon offering of the division. airbag, the entire instrument panel and dashboard received a redesign; all outboard seats received 3-point seatbelts. Following the 1960 demise of Edsel, full-size Mercury vehicles shared bodywork with Ford; the Colony Park served as the counterpart of the Ford Country Squire through 1991 9ed33c25db

Four of the surviving aircraft were later converted for civilian use to firefighting water bombers. Two of the aircraft remained based at Sproat Lake just outside of Port Alberni, British Columbia, Canada, with one, Hawaii Mars, remaining in operation until 2016. The British Columbia Aviation Museum acquired Hawaii Mars and it was flown there in 2024. The same... 9ed33c25db From 1979 until 2011, the Grand Marquis shared the rear-wheel drive (RWD) Panther platform with the Ford LTD Crown Victoria (Ford Crown Victoria after 1992), and from 1980, the Lincoln Town Car. For over three decades, the Ford and Mercury sedans were functionally identical, with two of the three generations of the model line sharing the same roofline... 9ed33c25db

The MQ-9 is a larger, heavier, more capable aircraft than the earlier General Atomics MQ-1 Predator and can be controlled by the same ground systems. The Reaper has a 950-shaft-horsepower (712 kW) turboprop engine (compared to the Predator's 115 hp (86 kW) piston engine). The greater power allows the Reaper to... 9ed33c25db

Martin JRM Mars Martin Company scaled up their PBM Mariner patrol bomber design to produce the prototype XPB2M-1 Mars. The United States Navy contracted the development of the XPB2M-1 Mars in 1938 as a long-range ocean patrol flying boat, which later entered production as the JRM Mars long-range transport. times The General Atomics MQ-9 Reaper (sometimes called Predator B) is a medium-altitude long-endurance unmanned aerial vehicle (UAV, one component of an unmanned aircraft system (UAS)) capable of remotely controlled or autonomous flight operations, developed by General Atomics Aeronautical Systems (GA-ASI) primarily for the United States Air Force (USAF). The MQ-9 and other UAVs are referred to as Remotely Piloted Vehicles/Aircraft (RPV/RPA) by the USAF to indicate ground control by humans. 950-shaft-horsepower (712 kW) turboprop engine (compared to the Predator's 115 hp (86 kW) piston engine)

In production for 34 years across eight generations (skipping the 1998 model year), the Cougar is second only to the Grand Marquis (36 years) in the Mercury line for production longevity. 2,972,784 examples were produced, making it the highest-selling Mercury vehicle. During the 1970s and 1980s, the marketing of the Mercury division was closely associated...

Mercury Grand Marquis Introduced as the flagship sub-model of the Mercury Marquis in 1975, the Grand Marquis became a stand-alone model line in 1983, serving as the largest Mercury sedan. regulations, the Grand Marquis was given a driver-side airbag; the rear outboard seats received 3-point seatbelts. The model line served as the sedan counterpart of the Mercury Colony Park station wagon up to 1991. Coinciding with the addition of the airbag The Mercury Grand Marquis is an automobile that was produced by Mercury from the 1975 until 2011 model years.

The fourth generation was the basis of the 2003 and 2004 Mercury Marauder

The R-2800 saw widespread use in many important American aircraft during and after World War II. During the war years, Pratt & Whitney continued to develop new ideas to upgrade the engine, including water injection for takeoff in cargo and passenger planes and to give emergency power in combat.

Propeller The blades are shaped so that their rotational motion through the fluid causes a pressure difference between the two surfaces of the blade by Bernoulli's principle which exerts force on the fluid. Getchell, David (1994), The Outboard Boater's Handbook, McGraw Hill Professional, ISBN 978-0-07023053-8 Admiralty Manual of Seamanship, Great Britain: A propeller (often called a screw if on a ship or an airscrew if on an aircraft) is a device with a rotating hub and radiating blades that are set at a pitch to form a helical spiral which, when rotated, exerts linear thrust upon a working fluid such as water or air. Most marine propellers are screw propellers with helical blades rotating on a propeller shaft with an approximately horizontal axis. Propellers are used to pump fluid through a pipe or duct, or to create thrust to propel a boat through water or an aircraft through air
