Concept inventory essay-based approach and the essay and oral exams concept to measure student understanding of Lewis structures in chemistry. Concept inventories are evaluated to ensure test reliability and validity. In its final form, each question includes one correct answer and several distractors. Historically, concept inventories have been in the form of multiple-choice tests in order to aid interpretability and facilitate administration in large classes. Some concept inventories are problematic A concept inventory is a criterion-referenced test designed to help determine whether a student has an accurate working knowledge of a specific set of concepts. The aims of the research include ascertaining (a) the range of what individuals think a particular question is asking and (b) the most common responses to the questions. Unlike a typical, teacher-authored multiple-choice test, questions and response choices on concept inventories are the subject of extensive research 0c7b8f939f

Metacognition Metacognition can take many forms, such as reflecting on one's ways of thinking, and knowing when and how oneself and others use particular strategies for problem-solving. The term comes from the root word meta, meaning "beyond", or "on top of". Research has shown that both components of metacognition play key roles in metaconceptual knowledge and learning. There are generally two components of metacognition: (1) cognitive conceptions and (2) a cognitive regulation system. Metamemory, defined as knowing about memory and mnemonic strategies, is an important aspect of metacognition. training including pretesting, self evaluation, and creating study plans performed better on exams.
