The Electron is able to save and load programs onto audio cassette via a cable, originally supplied with the computer, connecting it to any standard tape recorder with the appropriate sockets. It is capable of bitmapped graphics, and can use either a contemporary television set... 2bed8e84bb JETDS nomenclature 2bed8e84bb

ATX Originally released in July 1995, it was the first major change in desktop computer enclosure, motherboard and power supply design in many years, improving standardization and interchangeability of parts. specifications were patented by David Dent at Intel and co-developed with Astec America, a major manufacturer of power supplies. The specification defines the dimensions; the mounting points; the I/O panel; and the power and connector interfaces among a computer case, a motherboard, and a power supply. The inaugural version 1 ATX (Advanced Technology Extended) is a motherboard and power supply configuration specification developed by Intel to improve on previous de facto standards like the AT design 2bed8e84bb

Acorn Electron development of the Electron (among others too numerous to mention):- Bob Austin, Astec, Harry Barman, Paul Bond, Allen Boothroyd, Ben Bridgewater, Cambridge, John The Acorn Electron (nicknamed the Elk inside Acorn and beyond) was introduced as a lower-cost alternative to the BBC Micro educational/home computer, also developed by Acorn Computers, to provide many of the features of that more expensive machine at a price more competitive with that of the ZX Spectrum. It has 32 kilobytes of RAM, and its ROM includes BBC BASIC II together with the operating system. Announced in 1982 for a possible release the same year, it was eventually introduced on 25 August 1983 priced at £199 2bed8e84bb

List of military electronics of the United States The first letter of the designation following AN/ indicates the installation or platform where the device is used (e. This stand-alone list specifically identifies electronic devices which are assigned designations (names) according to the Joint Electronics Type Designation System (JETDS), beginning with the AN/ prefix. That This article lists American military electronic instruments/systems along with brief descriptions. The list is organized as sorted tables that reflect the purpose, uses and manufacturers of each listed item. A for piloted aircraft). They are grouped below by the first designation letter following this prefix. g. more 2bed8e84bb

All electronic equipment and systems intended for use by the U.S. military are designated using the JETDS system. The beginning of the designation for equipment/systems always begins with AN/ which only identifies that the device has a JETDS-based designation (or name). When the JETDS was originally... 2bed8e84bb
