Triceratops ('three-horned face') is a genus of chasmosaurine ceratopsian dinosaur that lived during the late Maastrichtian age of the Late Cretaceous period, about 68 to 66 million years ago on the island continent of Laramidia, now forming western North America. The name Triceratops, which means 'three-horned face', is derived from the Greek words trí- (τρί-) meaning 'three', ḱeras (κέρας) meaning 'horn', and ōps (ὤψ) meaning 'face'. "Wear biomechanics in the slicing dentition of the giant horned dinosaur Triceratops". Gregory; Krick, Brandon A. It was one of the last-known non-avian dinosaurs and lived until the Cretaceous–Paleogene extinction event 66 million years ago. Sawyer, W. Science Advances Triceratops (try-SERR-ə-tops; lit. Occupational therapy Occupational therapy is based on the assumption that engaging in meaningful activities, also referred to as occupations, is a basic human need and that purposeful activity has a health-promoting and therapeutic effect. Ergotherapy is derived from the Greek ergon which is allied to work, to act and to be active. occupation through multiple facets of science, including occupational science, anatomy, physiology, biomechanics, and neurology. Occupational

science, the study of humans as 'doers' or 'occupational beings', was developed by inter-disciplinary scholars, including occupational therapists, in the 1980s. In addition, this scientific Occupational therapy (OT), also known as ergotherapy, is a healthcare profession 81d8672a9c

Many chiropractors (often known informally as chiro), especially those in the field's early history, have proposed that mechanical disorders affect general health, and that regular manipulation of the spine (spinal adjustment) improves general health. A chiropractor... 81d8672a9c

Leptoceratops Specimens from Montana that were among the earliest referred to Leptoceratops have since been moved to their own genera Montanoceratops and Cerasinops, while new specimens of L. Protoceratopsidae began with the descriptions of new genera from Asia since 1975 and the introduction of phylogenetics to ceratopsian classification. Additional specimens found in the Scollard include one complete and two mostly complete skeletons together, uncovered in 1947 by Charles M. First found in Alberta in 1910, the type species Leptoceratops gracilis was named in 1914 by Barnum Brown for a partial skull and skeleton of two individuals found in the Scollard Formation of Alberta. Together with related. gracilis include bonebed remains from the Hell Creek Formation of Montana and a partial skeleton from the Lance Formation of Wyoming. American Leptoceratops (meaning 'small horn face') is a genus of ceratopsian dinosaur from

the Late Cretaceous of North America.

History of computer animation It was only by the early 1960s when digital computers had become widely established, that new avenues for innovative computer graphics blossomed. Thomas Calvert. By the late 1980s, photo-realistic 3-D was beginning to appear. Much computer graphics at this time involved 2-D imagery, though increasingly as computer power improved, efforts to achieve 3-D realism became the emphasis. A performer wears markers near each joint to identify the motion by the positions The history of computer animation began as early as the 1940s and 1950s, when people began to experiment with computer graphics – most notably by John Whitney. photogrammetric analysis tool in biomechanics research in the 1970s and 1980s. By the mid-1970s, many such efforts were beginning to enter into public media. Initially, uses were mainly for scientific, engineering and other research purposes, but artistic experimentation began to make its appearance by the mid-1960s – most notably by Dr 81d8672a9c

Fly Insects of this order use only a single pair of wings to fly, the hindwings having evolved into advanced

mechanosensory organs known as halteres, which act as high-speed sensors of rotational movement and allow dipterans to perform advanced aerobatics. H. Species (PDF). V. Flies have a mobile head, with a pair of large compound eyes, and mouthparts designed for piercing and sucking (mosquitoes, black flies and robber flies), or for lapping and sucking in the other groups.
