The first M5 model was hand-built beginning in late 1984 on the E28 535i chassis with a modified engine from the M1 that made it the fastest production saloon at the time. M5 models have been produced for every generation of the 5 Series since 1984, with occasional gaps in production (1995 to 1998, 2023 to 2024). Automatic – once placed in drive (or any other 'automatic' selector position), it automatically selects the gear ratio dependent on engine speed and load Manual – the driver has to perform each gear change using a manually operated clutch It uses a Lepelletier gear mechanism, an epicyclic/planetary gearset, which can provide more gear ratios with significantly fewer components... In the longitudinal direction, the gearbox is usually designed separately from the final drive (including the differential). The transaxle configuration combines...

The E53 X5 was developed just after the acquisition of Land Rover by BMW. As such, the vehicle shares many components and designs with both the Range Rover L322 model (specifically the hill descent system and off-road engine management system) and the BMW E39 5 Series (specifically engines and electronic systems). The entire in-car entertainment system (radio function, navigation system, television and telecommunications systems) are shared with other BMWs and L322. As a result, the earlier X5 models can be upgraded with newer BMW technologies (e.g. Bluetooth phone connectivity). Automatic transmissions are especially prevalent in vehicular drivetrains, particularly those subject to intense mechanical acceleration and

frequent idle/transient operating conditions; commonly commercial/passenger/utility vehicles, such as buses and waste collection vehicles. 7ce64dde7d
