consists of connected units or nodes called artificial neurons, which loosely model the
neurons in the brain. Artificial neuron models that mimic biological neurons more closely
have also been recently investigated and shown to significantly improve performance.
These are connected by edges, which model the synapses in the brain. Each artificial
neuron receives signals from connected neurons, then processes them and sends a signal
to other connected neurons. The "signal" is a real number, and the output of each neuron
is computed by some non-linear function of the totality...
